INTRODUCTION

- Rainbow Star Training Services LLC-an ISO-certified company - was established on October 2019 as a training center that caters the certification needs of staff in all levels of Oil & Gas, EPC - Engineering, Procurement, Construction industry's to make them fully equipped to face the challenges of their role at their work place, be it on-shore or off-shore.
- Rainbow Star Training Services LLC has an extensive experience in providing training services in the most demanding environments, covering a wide range of training courses in different categories such as Technical and HSE training courses and aimed at companies from different sectors.
- Our competitive advantage is in the excellence of our educational services, focusing on industry engagement and collaboration to develop training solutions to meet the needs of individuals and the organization, we offer flexible delivery strategies designed to meet the vast and varied learner styles to enhance learner engagement, add credibility and relativity to our programs in order to actively drive the productivity and competitiveness of organizations/industries, as well as contribute to the social and economic development of our local communities.

ABOUT US

- As a training & consultancy, we take pride in providing our clients the technical training and professional development in their field.
- **We have Instant online booking on <https://rsts.ae/> Batches are scheduled every week for all our centers.**
- Our all Centers' are fully air – conditioned, sound proofed and located in prime areas of the city.
- Our company is accredited from IWCF & IADC and offer comprehensive its courses with top-caliber instructors.
- All of our instructors in our training center are highly experienced, certified, with rich experience in both onshore and offshore rigs and have vast knowledge in the field of Oil & Gas industry giving out Oil and Gas training courses.
- We are an approved ADNOC Supplier for our all training services.
- We have training centers with all modern facilities.
- We also provide accommodation and visa assistance for any of our locations countries if required.
- Our trainer team include more than 20 regular qualified and intelligent instructors with rich experiences and vast knowledge of Oil & Safety industry.
- We also offer facility to conduct training to client's requirements anywhere in the world site if required on 1 week prior notice.
- Our Centre's are equipped with approved portable simulators manufactured by CSInc., USA.

Our Mission

- Our mission is to cater the certification needs of all staff in all levels in Oil and Gas industry to make them fully equipped to face the challenges of their role at their work place – be it on-shore or off-shore sector.
- Our target is to deliver clear and concise trainings to equip the staff with the practical knowledge and skills required in performing their duties with the highest international standards.
- We aim to be accredited with the international accreditation bodies and be the accredited training center in the UAE providing top caliber courses in Oil and Gas sector.

Our Vision

- Our vision has always been to respond quickly on the needs of the market in Oil and Gas sector. To provide high quality learning courses with international standards and quality.
- We understand that well trained, skilled employee is at the root of the business success of an employer.
- Our focus is to bring this mission of providing skill to all positions whether they are for an entry level post or of for the position of Executive Director with a multinational corporation, whether it's permanent or temporary contractual opportunity.

Inhouse HSE Training

Overview

Health and safety awareness training is mandatory for staff at all levels of an organization. This is the ideal course to satisfy that requirement – a stimulating ‘entry-level’ program explaining how health and safety should be managed in any working environment.

The course outlines the basics of health and safety law and how organizations and individuals can become liable for health and safety offences. Roles and responsibilities for health and safety are discussed by reference to the key legislation and the expert trainer will explore with the delegates how these responsibilities are managed in practice in different types of organization. The principles of risk assessment will be considered and their practical implementation discussed in relation to the management of the various hazards that are likely to be present in a typical workplace.

Training objectives

This course will give staff an understanding of health and safety law, liability, and enforcement.

An explanation of the principles of health and safety management in the workplace and an understanding of who should be responsible for different aspects of health and safety

A practical explanation of risk assessment and what constitutes a suitable and sufficient assessment
A broad knowledge of the typical hazards in a workplace and how these should be managed.

Audience

This course provides the necessary health and safety awareness training for anyone in a working environment. It also provides the essential foundation for those involved in middle or senior management.

Format

An interactive one-day course, with 25% of the day devoted to practical exercises. In this format, we recommend that the number of participants be limited to 16 in order to maximize the opportunity for interaction and facilitated discussion and to allow participants to explore practical examples relevant to their own situations.

Special features

The course can easily be tailored to specific working environments, eg, offices, warehouses, process industries

Technical Drilling Training

Overview

The end goal of drilling operations is simple: to create a safe, stable hole in the ground. The mechanics of accomplishing this goal, which will be covered in this section, are more complex.

Drilling operations should result in:

- A wellbore that intersects the producing formation.
- A wellbore that is isolated from groundwater and non-producing formations.
- A wellbore that is capable of containing formation pressures.
- A drill site that is safe and environmentally compliant.
- A profit for the company drilling the well.

Our courses introduces the technologies that make drilling and completions possible, typical operational methods for drilling and completing wells, and methods for solving problems that come up during the drilling process.

Training objectives

To be able to:

- Understand basic well design principles and drilling technology
- Increase knowledge in casing design
- Understanding the cementing operation of a well
- Describe and understand the use of drilling equipment used in rotary drilling
- Increase knowledge in the use of well control equipment
- Obtain sufficient knowledge about the course content to pass a written test with minimum 70% score

Audience

- A drilling engineer, well site supervisor, tool pusher, rig manager or field support personnel
- A geoscientist or reservoir engineer looking to get better value from your interactions with the drilling team
- Involved in improving drilling performance and cutting drilling costs

Format

An inter-active one-day course, with 25% of the day devoted to practical exercises. In this format, we recommend that the number of participants be limited to 8 in order to maximize the opportunity for interaction and facilitated discussion and to allow participants to explore practical examples relevant to their own situations.

Special features

The course can easily be tailored to specific working environments of Oil & Gas industries

The International Well Control Forum (IWCF) is the only independent body focused on oil and gas well control training, accreditation and certification.

The International Well Control Forum (IWCF) is a not for profit membership organization. Its key aim is to develop and administer well control training, assessment and certification programs for the exploration and production sector of the oil and gas industry.

They work closely with national regulatory bodies and key industry leaders, such as the International Association of Oil and Gas Producers (IOGP). Following on from IOGP's recommendations in Report 476, new syllabi have been introduced for our Drilling Well Control and Well Intervention Pressure Control programs. These programs are split across five levels to provide employees with the necessary skill set for their role in the oil and gas industry. By providing certified training through accredited centers IWCF wants to prevent well controlled incidents from occurring.

IWCF programs are delivered by a global network of accredited centers. All assessments are organized by IWCF and take place in closed book examinations. These are invigilated by independent invigilators to ensure correct practice is followed.

IWCF Level 2 Introductory Drilling Well Control

Overview: The aim of this course is to provide a basic understanding of the features of drilling a well and the fundamental principles involved in maintaining well control.

Designed For: The Level 2 (Introductory) course is designed for candidates currently working in roles which may directly contribute to the creation, detection or control of a well influx. Level 2 Drilling Well Control training and certification is recommended for those working in roles such as Roughneck, Derrickman, Barge Engineer, BOP/Subsea Engineer, Mud Logger or Wellsite Drilling Data Engineer, and many others.

Course Delivery: The course is delivered over 4 days and includes IWCF written assessments on the final day.

Certification: Candidates may select either "Combined" (Surface & Subsea) or "Surface Only" BOP Stack certification. Successful completion of the course and a pass mark of 70% or above in all IWCF written assessments will result in IWCF Level 2 certification which is valid for five years.

IWCF Level 3 Drilling Well Control

Overview: The IWCF Level 3 Drilling Well Control course is essential training for those currently working in a role that is expected to shut-in a well. The course aims to reinforce and improve the candidate's existing knowledge and appreciation of the various stages of shutting-in a well; from kick detection to shutting in the well, to monitoring once the well is shut in and monitoring the well-kill operation.

Designed For: The Level 3 (Driller) course is designed for anyone expected to shut-in a well, such as drillers and assistant drillers. Please note: IWCF training levels 2 to 4 are designed to be sequential and first-time candidates are expected to complete Level 2 before progressing to Level 3 or Level 4. However, the training levels are also designed to be role-specific and dependent on the candidate's work experience.

Course Delivery: The course is delivered over 5 days and includes IWCF written and practical assessments on the final day.

Certification: Candidates may select either "Combined" (Surface & Subsea) or "Surface Only" BOP Stack certification. Successful completion of the course and a pass mark of 70% or above in all IWCF practical and written assessments will result in IWCF Level 3 certification which is valid for two years.

Entry requirement: The candidate must be pre-registered with IWCF and able to provide his/her 6-digit IWCF Candidate Registration (CR) Number. Prior certification is not required but previous experience in a supervisor role during drilling operations is assumed. Please contact us to discuss candidate suitability if you have any doubts or queries.

IWCF Level 4 Drilling Well Control

Overview: The IWCF Level 4 Drilling Well Control course is essential training for those working in wellsite supervisory roles and for office-based personnel that are primarily involved in the operational decision-making process and/or well design. The course aims to build on Level 3 course content (including kick detection and shut-in) and focus on more complex aspects of well control and well kill methodology.

Designed For: The Level 4 (Supervisor) course is designed for anyone working in a supervisory role and involved in the well design and operational decision-making process of drilling, such as a Drilling Supervisor, Superintendent or Company Man, Tool Pusher, OIM, or Rig Manager.

Course Delivery: The course is delivered over 5 days and includes IWCF written and practical assessments on the final day.

Certification: Candidates may select either "Combined" (Surface & Subsea) or "Surface Only" BOP Stack certification. Successful completion of the course and a pass mark of 70% or above in all IWCF practical and written assessments will result in IWCF Level 4 certification which is valid for two years.

Entry requirement: The candidate must be pre-registered with IWCF and able to provide his/her 6-digit IWCF Candidate Registration (CR) Number. Prior certification is not required but previous experience in a supervisor role during drilling operations is assumed. Please contact us to discuss candidate suitability if you have any doubts or queries.

The International association of Drilling Contractors Well Control Accreditation Program (WellSharp™) was originally designed in 1995 to assist industry professionals in developing and delivering well control training that conforms to industry-recognized standards. The requirements, guidelines and recommendations were made to help steer the user toward the proper professional approaches that should be used to establish a training program in wellcontrol.

The Well Sharp program, which evolved from Well CAP, was revamped and revitalized at the request of industry. Working in collaboration with the WellCAP Advisory Panel, the IADC Well Control committee, and other industry workgroups, the WellSharp program represents and industry-led effort to redefine well control training. Using quality benchmarks and criteria developed together with operators, drilling contractors, professional trainers, and well control specialists, WellSharp helps to ensure that well control training schools adhere to a core curriculum developed by industry. International Association of Drilling Contractors Well Control Accreditation Program (WellSharp™) was originally designed in 1995 to assist industry professionals in developing and delivering well control training that conforms to industry-recognized standards. The requirements, guidelines, and recommendations were made to help steer the user toward the proper professional approaches that should be used to establish a training program in well control. Enhanced assessment process which differs from Well CAP now it is online and proctored.

IADC WELLSHARP WELLSERVICING COURSES

WELLSERVICING WORKOVER COURSE

Duration: 4 Day with exam.
Certificate Validity: 2 years.
Designed for: Contractor Superintendent,
Supervisor Crew Chiefs(Driller) (RigForeman),
etc.

WELLSERVICING WIRELINE COURSE

Duration: 4 Day with exam.
Certificate Validity: 2 years.
Designed for: Field Engineers (Cased
Hole/Open Hole/Pipe Recovery/Production
Logging/TCP etc.

WELLSERVICING COILED TUBING COURSE

Duration: 4 Day with exam.
Certificate Validity: 2 years.
Designed for: Supervisor, Engineer, Coiled
Tubing Operator etc.

WELLSERVICING SNUBBING COURSE

Duration: 4 Day with exam.
Certificate Validity: 2 years.
Designed for: Supervisor, Engineer,
Snubbing Operator etc

OIL & GAS OPERATOR REPRESENTATIVE COURSE

Duration: 5 Day with exam.
Certificate Validity: 2 years.
Designed for: Wellsite Leaders/Company
Man, Company Representative.

IADC WELLSHARP DRILLING COURSES

DRILLING OPERATIONS INTRODUCTORY COURSE

Duration: 3 Day with exam.
Certificate Validity: 5 years.
Designed for: MPD / UBD well site service
personnel (non-supervisory) etc.

DRILLING OPERATIONS DRILLER COURSE

Stack: Surface / Subsea.
Duration: 5 Day with exam.
Certificate Validity: 2 years.
Designed for: Assistant Driller, Driller
etc.

DRILLING OPERATIONS SUPERVISOR COURSE

Stack: Surface / Subsea.
Duration: 5 Day with exam.
Certificate Validity: 2 years.
Designed for: Driller, ToolPusher,
Supervisor.

HIGH PRESURE HIGH TEMPERATURE

Overview: This HPHT Drilling course provides a comprehensive understanding of the well design and operational requirements for HPHT wells. It develops the principles of HPHT well engineering from rig selection through well control and HPHT considerations for casing design, drilling fluids and cement formulations. The course draws on case studies for classroom discussions.

Designed For: The Senior drilling personnel with no previous HPHT experience and desiring to work in HPHT field to learn the areas of complexity for this type of reservoir and ultimately to know how to work with HPHT wells.

Course Delivery: The course is delivered over 3 days and includes written assessments on the final day.

Content:

- What is HPHT?
- Why HPHT needs special preparation
- Why better management and response time is needed.
- Quick review of disasters at high pressure and temperature wells.
- Muds for high temperature drilling and workover. Hydraulic calculations.
- Failure of mud parameters to be stable.
- Cements for high temperature and pressures.
- Equipment needed: Drill bits, Drill motors, hi-temperature greases and chemicals, effect on drill collars and steel, special rubber and seal material and techniques.
- Simultaneous kick and underground blowout from one formation to another.
- Design of drilling, casing, and workover assemblies. Stresses and temperatures
- Gas Behaviors, Kicks and Control
- Gas Solubility in Oil Based Mud – Effects on Kick Behavior.
- Surface Gas Handling Capacities and Procedures for HPHT Well Programs
- Shut In Procedures and Decision Trees
- Bull heading Overview
- Volumetric Method of Well Control
- Stripping
- The effects of Temperature and Pressure on Muds
- The effects of Borehole Ballooning on Drilling Responses
- Management of Operations

Certification: Multiple Choice Questions: 80 and Duration will be 2 hours. Successful completion of the course and a pass mark of 70% or above in written assessments will result in certification which is valid for two years.

Entry requirement: The Prior certification is not required but previous experience in a supervisor role during drilling operations is assumed. Please contact us to discuss candidate suitability if you have any doubts or queries.

Basic First Aid

Courses Duration: 8 hrs.

Scope: Basic First Aid is a combined adult CPR, AED and first aid training program designed specifically for the occupational first aid provider. This extremely flexible program will help employers meet OSHA and other federal and state regulatory requirements for training employees how to respond and care for medical emergencies at work. This program conforms to the 2015 AHA Guidelines Update for CPR and ECC and the 2015 AHA and ARC Guidelines Update for First Aid.

Course is designed for: Any personal in any sector and any organization

Topics covered under the course:

- Preparing to Help
- CPR and AED
- Assessment
- Sudden Injury
- Sudden Illness
- Environmental Emergencies
- Bites and Stings

Courses validity : 2 years

Basic Fire Fighting

Courses Duration : 8 hrs.

Scope: Basic The aim and objective of Fire Safety Training program is to train the candidates so that they can make their employees aware to identify the causes of fire and prevention, propagation and control measures. This training program helps the delegates to be aware about using fire extinguishers to the corresponding fires and understand the evacuation process and emergency drills.

Course is designed for: Any personal in any sector and any organization.

Topics covered under the course:

- Identify the elements of fire.
- Knowledge of classification of fire.
- Demonstrate knowledge of the different types of fire.
- Identify the various causes of a fire.
- Demonstrate knowledge of preventing a fire.
- Knowledge of different types of fire extinguisher.
- Knowledge of using fire extinguishers.
- Evacuation.
- Emergency Drills
- Role of Trainer
- Communicating with Learners and Providing Feedback
- Presentation Skills
- Giving Feedback
- Practical Training Assessment
- Evaluation and Assessment

Courses validity : 2 years

H2S Safety

Courses Duration: 8 hrs.

Scope: Basic The objective of this course is to increase your awareness of how H₂S is formed and where it can be found. It will also show you how you can protect yourself from exposure and give advice about what to do if an emergency should occur in your workplace. Hydrogen Sulfide, or H₂S is a colorless, highly flammable and highly toxic gas, which is a common by-product found in many different industries. Accumulating in low lying areas, it may go unnoticed. In high Doses, on breath can kill instantly. This course will provide delegates with the additional skills, knowledge, information, as well as equip them with the appropriate attitudes to enable them to identify and manage a H₂S hazard, assess the risks and implement the appropriate control measures.

Course is designed for: This course is designed for Drilling and work over crew

Topics covered under the course:

- Origin of H₂S
- Property of H₂S
- Initial Response Strategy
- Occupational Exposure Limits
- Health Hazards of H₂S Gas
- Respiratory Protective Equipment (SCBA & SABA)
- Detection of H₂S
- First Aid and Rescue

Courses validity: 2 years

Authorized Gas Tester

Courses Duration: 8 hrs.

Scope: Basic The aim and objectives of Gas Tester training program is to ensure that personnel preparing for a gas tester role are equipped with the knowledge to conduct gas tests for oxygen levels, flammable and toxic gases safely. This training program also equips the delegate with knowledge to conduct gas testing within confined spaces and awareness of associated confined space hazards. Candidates will also learn about relevant knowledge of gas measuring and monitoring equipment and documenting gas test results.

Course is designed for: Supervisors, Employees and Employers who have responsibilities for work related to gas testing.

Topics covered under the course:

- Hazards of operations within an oxygen deficient, toxic or flammable environment
- Carrying out a suitable and sufficient risk assessment.
- Using Safe systems of work.
- Interpreting operational requirements
- Hazards present in the confined space.
- Procedures and conditions to ensure that atmospheric conditions are safe for confined space entrants.
- Equipment required to test and monitoring the atmospheric gases.
- Identification of different types of Gas Detectors.
- Filling out Permits, Risk Assessment and Gas Test certificate.
- Pre-check start-up of Multi Gas Detector.
- Reading and Interpreting gas levels for Oxygen, CO, H₂S and LEL levels. Knowing acceptable values.
- Detecting gas levels at the different levels like top, middle and bottom level of the confined space to know the varying concentration of gas and vapors in the confined space.
- Maintenance, Calibration and Bump test for Gas Detectors.

Courses validity: 2 years

BASIC HSE AWARENESS

Courses Duration: 8 hrs.

Scope: Basic The aim and objectives of Basic HSE Course are to ensure safety in the field by avoiding injury risks. Identify hazards, analyze or evaluate the risk associated with that hazard, and determine appropriate ways to eliminate or control the hazard.

Course is designed for: Facility Managers, Supervisors, Employees and Employers to ensure occupational safety of self and others

Topics covered under the course:

- Why HSE is important.
- Understanding Hazards and Risks
- Hazard Identification And Risk Assessment
- Controlling Hazard.
- Understanding Incident, Accident and Near Miss.
- Occupational Injury

Courses validity: 2 years

Permit to Work(PTW)

Courses Duration : 8 hrs.

Scope: Basic The purpose of this course is to educate students principles of Permit to Work (PTW) System, benefits of using the PTW, correct application of the PTW, tasks that requires PTW, the different PTW associated permits required for a certain task.

Course is designed for: Facility Managers, Supervisors and Employers who have responsibilities to train their employees to make them aware about work related to permit for work.

Topics covered under the course:

- | | |
|--|---|
| <ul style="list-style-type: none"> • Permit to Work (PTW). • Define non-routine activities, permit holder. • Ptw systematic approach. • Importance of a permit to work? • Why do we need ptw • Jobs require permit to work? • Types of work permit • Raising & processing ptw • Permit review • Client representative involvement • Ptw authorization | <ul style="list-style-type: none"> • Energy isolation • General precautions • Monitoring compliance with PTW requirements • Permit cancellation • How to make ptw system effective • Lockout / tagout • Isolating the energy • Restoring energy |
|--|---|

Courses validity : 2 years

RAINBOW STAR
TRAINING SERVICES LLC

Courses Duration : 8 hrs.

Scope: Basic The aim and objectives of Confined Space Entry training programmer is to make the personnel aware about requirement to work in the confined space. This will help them to identify the hazards in the confined space, prevention and mitigation of the risk factors while working in the confined space.

Course is designed for: Facility Mangers, Supervisors, Employees and Employers who have responsibilities to work in the confined space.

Topics covered under the course:

- Confined space Identification.
- Identifying the hazards and risks associated with the confined space.
- Knowledge about requirement of Permit and risk assessment.
- Testing for hazardous atmosphere.
- Making the space as safe as possible.
- Approach to safe entry in the confined space.
- Attendant and Evacuation procedure.
- Identification of the confined space.
- Filling out permit and risk assessment form.
- MSDS Exercise – split the class in two. Have the class fill out the MSDS exercise sheet and compare the chemical properties.
- Atmospheric gas testing by Multi-gas detector in the confined space and recording it in the permit form.
- Assigning the responsibilities of attendant, entrant and rescue team.

Courses validity : 2 years

Working at Height

Courses Duration : 8 hrs.

Scope: Basic This training program will be beneficial for all employees who will be exposed to fall hazards in the work area. Candidates will be trained to recognize the hazards of falling from elevations and to avoid falls from walking/working surfaces. This training will help candidates about using fall protection, risk assessments and developing rescue plan prior to do the job.

Course is designed for: This course is designed for all Mangers, Supervisors and workers in any industry where workers are involved exposed to hazards of working at height.

Topics covered under the course:

- A description of fall hazards in the work area
- Knowledge of types of environment where fall could occur.
- Fall Protection Plan
- Measures to protect against falls.
- Fall Protection equipment and selection
- Permit to Work and JSA for working at height.
- Dangers of Suspension trauma.
- Proper use and storage of fall protection and fall arrest equipment.
- Selection of correct size harness
- Inspection of harness
- Selection of proper lanyard for job
- Inspection of lanyard
- Donning the Safety Harness and connecting Lanyard
- Properly identify correct improvised anchorage
- Correctly hook-up, ascend, & descend a structure
- Maintaining 100% tie-off while at heights

Courses validity : 2 years

RAINBOW STAR
TRAINING SERVICES LLC

Rescue at Height

Courses Duration : 8 hrs.

Scope:

- Overview of Rescue at height
- Sample Working at Heights Rescue Procedures
- This document is intended to provide guidance for developing site-specific working at heights rescue plans.

Course is designed for: This course is designed for all Managers, Supervisors and workers in any industry who involve in working at Height.

Topics covered under the course:

- Company Policy on Working at Heights Rescues
- Purpose of Working at Heights Rescues
- Emergency Planning
- Emergency Response Plan
- Rescue Procedures
- Elevating Work Platform Rescue
- Ladder Rescue
- Rescue from Work Area or Floor Below
- Basket Rescue
- Post-Rescue Procedure

Courses validity : 2 years

Defensive Driving

Courses Duration : 8 hrs.

Scope: Basic This is instructor led classroom course that teach employees techniques for recognizing hazards, avoiding collisions and choosing safe driving practices. This course can help organization save lives, protect financial resources and guard against the liabilities associated with crashes involving employees on company business.

Candidates will learn about:

- Defensive driving techniques to reduce the chance of collision.
- Strategies to change risky driving behaviors and attitudes.
- Collision preventions through hazard recognition and application of collision avoidance techniques.

Course is designed for: Personnel with valid driving license and experience of driving vehicles.

Topics covered under the course:

- Speed Management
- Lane Management
- Avoiding Collisions with Fixed Objects
- Avoiding Impaired Driving
- Avoiding Fatigued Driving
- Avoiding Aggressive Driving
- Intersections
- Weather and Road Conditions
- Backing and Parking Strategies
- Setting a Higher Standards
- Handling Driving Conditions

Courses validity : 2 years

Overhead and Gantry Crane Safety

Courses Duration : 8 hrs.

Scope: The aim and objectives of Overhead and Gantry Crane Safety Course are to safely operate Overhead and Gantry Crane with the help of checklists, standards and hand signals.

Course is designed for: Facility Managers, Supervisors, Employees and Employers who have responsibilities for daily operations involving crane.

Topics covered under the course:

- Overhead and Gantry Crane operation
- How to avoid Swinging loads
- Periodic inspection Chart
- Periodic inspection Items
- Operational Safety
- Standard Hand Signals
- Facts: Fatalities
- Accidents
- Overview of Subpart N
- Cranes and Derricks
- Hazards in Crane Operation
- Causes of Crane Failure
- Powerlines - OSHA
- Powerlines - ANSI B30.5

Courses validity : 2 years

Forklift Operator Competency

Courses Duration : 8 hrs.

Scope: Understand how forklifts work.

Course is designed for: Any

Topics covered under the course:

- Understand how forklifts work.
- Operate a forklift safely and skillfully.
- Identify operating hazards.
- Apply general principles of safe operation.
- Properly inspect and maintain a forklift.
- Forklift Basics
- Determine a Load's Center of Gravity
- Stability Triangle
- What Can Cause a Tip over?
- Attachments
- Conduct a Preoperational Inspection
- Battery Charging
- Traveling
- Loading and Unloading Operating Hazards— Pedestrians
- Operating Hazards—Environmental Conditions
- Operating Hazards—Load Carrying

Courses validity : 2 years

Courses Duration : 8 hrs.

Scope: To enable the delegates to be reasonably aware of the various types of scaffold, their uses and construction, faults most commonly encountered, and safe methods, within the job role, to deal with them.

By the end of the training course delegates will be able to:

- Understand the requirements of the relevant legislation, British Standards Code of Practice and industry standards.
- Identify the safe working loads for working platforms.
- Differentiate between various scaffold systems and for what purpose they should be used.
- Understand statutory inspections of basic tube and fitting scaffolds.

Course is designed for: Engineers, Supervisors, Operatives, or any person(s) who encounter steel tube and fitting scaffolds as part of their working duties or on an irregular basis.

Topics covered under the course:

- Applicable legislation, BSEN12811 part 1, HSE recommendations, current industry practice and SG4:15.
- Working platforms and their safe working loads
- The appreciation of all types of tube and fitting scaffolding.
- Why scaffolds collapse. Recent accidents and incidents.
- The clients brief, risk assessment, method statement & rescue plans
- Scaffold Design (When is it required?)
- TG20 overview
- Scaffolders training and qualifications to ensure competence
- Scaffold Safe Working Practices
- Safe Use of Scaffolding
- Access to and from scaffolding
- Monitoring scaffolding operations on site

Courses validity : 2 years

Scaffolding Inspection

Scope: To enable the delegates to be fully aware of the various types of scaffold, their uses and construction, faults most commonly encountered and to carry out statutory inspections and completion of reports on basic scaffolds and aluminum access towers.

By the end of the training course delegates will be able to:

- Understand the requirements of the relevant legislation, British Standards Code of Practice and industry standards.
- Identify the safe working loads for working platforms.
- Differentiate between various scaffold systems and for what purpose they should be used.
- Understand statutory inspections of basic tube and fitting scaffolds.

Course is designed for: Delegates who have awareness and experience of scaffolding structures, which would have come from time spent in their individual industry sector e.g. construction, engineering, and offshore etc. Managers, Supervisors and Operatives who are responsible for inspecting scaffolds and completing reports in accordance with statutory Regulations.

Topics cover Regulations and approved Codes of Practice, Understand the requirements of the relevant legislation

- including; EN12811 part 1 (TG20:13,) HSE recommendations for inspecting scaffold systems.
- Working platforms and their safe working loads.
- Scaffold systems including; independent tied scaffolds, system scaffolds and mobile aluminum towers.
- Safe access and egress.
- The inspection of all types of scaffold (independent, putlog, mobile and static towers).
- ☐ Statutory Inspections and completion of reports also incorporating handover certificates and manufacturers' instructions for basic towers.
- Scaffolding terminology
- Tubes, boards and fittings
- Ladders
- Gin wheels and ropes
- Scaffold ties
- Construction regulations and recommendations of basic scaffolds to include:
 - independent tied scaffold
 - putlog scaffold
 - birdcage scaffold
 - static tower
 - basic independent tied scaffold
 - scaffolds with prefabricated beams
 - protective fans, pavement gantry
 - loading bay, roof saddle scaffold
 - splay scaffold roof edge protection
 - practical inspection
 - reports.
 - Identify the safe working loads for working platforms.
 - Differentiate between various scaffold systems and for what purpose they should be used.
 - Adopt a safe working practice for the use of ladders for access and egress.
 - Appreciate the safe erection, alteration and dismantling procedures as laid out in SG4:10.
 - Carry out statutory inspections of all types of basic scaffolds and mobile towers.
 - red under the course:

Courses Duration : 8 hrs.

Scope: Basic

- To acquire a suitable supervisory knowledge and management skill that is tailored to the contract scaffolding industry.
- To give delegates knowledge and skills to plan and supervise scaffolding operations as first-line scaffolding supervisors/managers, trainee supervisors/managers.
- By the end of the training course delegates will be able to:
- Identify existing or predictable hazards in the surroundings or working conditions which are unsanitary, hazardous, or dangerous to employees, and who has the authorization to take prompt corrective measures to eliminate these hazards.
- Design and preplanning of the scaffold including weight limitations, scaffold type, fall protection, tie-offs, supports, etc.
- Overseeing the erection of the scaffold
- Final inspection of the scaffold prior to initial occupation for use.
- Documentation of the condition of the scaffold and its ability to be occupied safely.
- Inspections of scaffolds after changes / alterations have been made.
- Oversight and inspections of mobile scaffolds.
- Tool box talks to scaffold erectors, and users.

Course is designed for:

This scaffolding course is aimed at established and trainee/prospective line-management of scaffolding contractors, with direct supervisory responsibility for scaffolding operations

Potential, newly appointed or existing supervisors with at least 7 years' experience in the scaffolding industry.

Topics covered under the course:

- Planning and Organization, Materials and Logistics Competence and Allocating Duties. Effective Supervision
- Commissioning and Handover
- Statutory Scaffold Inspections and Inspection Practices
- Effective Communication (including basic presentation skill, briefings and toolbox talks) Meeting Skills & Customer Relation ☐ Planning & organisation
- Materials & logistics
- Competence & allocating duties.
- Effective supervision
- Commissioning & handover certificate
- Statutory scaffold inspections.
- Planning & Organization
- Health & safety management
- HSE ACOPs and guidance ☐ Risk assessment project.

Courses validity : 2 years

Rigging and Slings

Courses Duration : 8 hrs.

Scope: Basic The purpose of this course is to educate students on the different types of rigging and the safe practices of rigging within sound engineering designs. These topics covered in the course are mentioned below

Course is designed for: Any

Topics covered under the course:

- Rigging Hazard Awareness.
- Rules for Rigging Safety.
- Rigging equipment for material handling.
- Disposal of waste materials.
- Gear and Equipment for Rigging and Materials Handling.
- Safe Rigging Practices.
- Job Site Considerations.
- Rigging Selection.
- The Users Responsibilities.
- Basic Sling Operating Practices.
- Sling types.
- Sling and lifting device pre-use inspection.
- Safety during the lift.
- After the lift.
- Conclusion

Courses validity : 2 years

Root Cause Analysis

Courses Duration : 8 hrs.

Scope: Basic It is a popular and often-used technique that helps people answer the question of why the problem occurred in the first place. Root Cause Analysis seeks to identify the origin of a problem. It uses a specific set of steps, with tools such as the 5 Whys and Cause & Effect Diagram, to find the primary cause of the problem, so that you can determine what happened, why it happened and figure out what to do to prevent its recurrence.

Course is designed for: Employee in the organization who have responsibility to involved in the analysing cause of hazards and risks while working.

Topics covered under the course:

- Understand the importance of performing root cause analysis
- Identify the root cause of a problem using the problem solving process
- Understand the application of basic quality tools in the problem solving process

Courses validity : 2 years

RigPass

Courses Duration : 8 hrs.

Scope: Basic HSE Rig Pass is designed to provide new employees with a basic orientation of rig operations and safe work practices to improve the safety performance of the Service Contractor and the E & P Operator and to assist both in satisfying federal, state and industry regulations and recommended practices.

Provide the participant the additional knowledge, skills, and appropriate attitudes to enable identification and management of their safety while working in the petroleum drilling and production industry.

Course is designed for: All employee working in rig

Topics covered under the course:

- | | |
|--|-----------------------------|
| 1. General Safety | 7. Materials Handling |
| 2. Personal Protective Equipment | 8. First Aid |
| 3. Hazard Communication and Hazardous Materials Handling | 9. Rig/Platform Environment |
| 4. Occupational Health | 10. Emergency Response |
| 5. Specialized Work Procedures | 11. Transportation Offshore |
| 6. Fire Safety | 12. Water Safety |

Courses validity : 2 years

Safety Leadership Training

Courses Duration : 8 hrs.

Scope: The aim and objectives of Safety Leadership Training are to explain the true qualities a true leader. This will help to build, maintain and improve relationships by using effective and positive leadership approaches and thereby improve safety performance in the workplace.

Course is designed for: Facility Managers, Supervisors who have leadership responsibilities for work related to HSE

Topics covered under the course:

- | | |
|-----------------------------------|---|
| • Introduction | • Safety Culture |
| • Safety Initiatives | • Leadership Strategies |
| • Futility of Safety Enforcement. | • Behavior based safety (BBS) approach? |
| • Resistance Strategies | • Reinforcement |
| • The Job Hazard Analysis (JHA) | • Goal Setting and Feedback |
| • Why the JHA? | • Leadership influence |
| • Accountability | • Conclusion |

Courses validity : 2 years

Courses Duration : 8 hrs.

Scope:

- Statistically, safe attitudes result in accident prevention.
- Safe attitudes result in safe behaviors at work.
- Development of improved safe attitudes toward work.
- Elimination of workplace injuries & illnesses where possible.
- Reduction of workplace injuries & illnesses where possible.

Course is designed for: This course is designed for all Managers, Supervisors and workers in any industry.

Topics covered under the course:

- Company safety policy.
- Initial training
- Behavioral-based safety
- Program implementation
- Responsibility is important
- Management's role
- The supervisor's role & responsibility
- The employee's role
- Safety committee
- Worksite analysis
- Observing behavior
- Behavior reinforcement
- Motivational techniques
- Attitude
- The human factor
- Transactional analysis
- Accident causation
- A word of caution

Courses validity : 2 years

Apart from given training courses we can also provide other accredited training on-demand

Drops Survey & Management

Prevention is better than hasty remedy

Drops Survey & Management (DROPS) baseline survey is a critical component of our inspection services as it helps us identify potential risks and provide you with the most efficient and effective safety maintenance strategy, tailored to your specific needs.

Dropped objects are responsible for hundreds of injuries and fatalities in numerous industry sectors including the Oil, Gas, and Drilling Industry. To improve workplace health and safety, ensure HSE compliance, and alleviate the risks involved in dropped objects, it is vital to perform proper inspection and implement preventive measures.

Our DROPS Baseline Survey includes:

- DROPS inspection and bolt inspection.
- Closing of DROPS findings and tidying at height.
- Verification and correction of securing methods at height.
- Compilation of DROPS management system with picture books, Pre-Task and collision checklists, and procedural guides and user manuals.
- Review of existing DROPS barriers and establish better safety measures

DROPS
DROPPED OBJECTS
PREVENTION SCHEME

Rig Inspection, Audits and Rig Commissioning

Rig inspections, also known as rig audits, are conducted on drilling assets for both drilling contractors and drilling operators to assess the condition of an asset. Rig inspections are conducted to industry standards, such as API, as well as to specific client requirements. Rig commissioning involves ensuring that rig machinery and equipment are functioning properly and in accordance with the client's requirements.

RSTS is highly experienced and multi-skilled personnel provide high-quality services in rig inspections and rig commissioning to the oil and gas industry. Our efficient approach enables us to reduce the number of personnel required to complete a rig inspection programme, resulting in real cost-savings. Prior to each project, tailored work-scopes are prepared to the client's requirements and the type of asset being inspected (land rig, jack-up, semi-sub, drillship, etc.). This focus on work-scope helps to reduce the amount of time required onsite.

RAINBOW STAR
TRAINING SERVICES LLC

Courses validity : 3 years

Courses Duration : 5 days.

Scope: This training course is intended to give the participants an appreciation of the financial importance of hydrocarbon flow metering and its implications to the profitability of the business.

Course is designed for: Any

Topics covered under the course:

Day 1: The Concepts of Hydrocarbon Custody Transfer Measurement

- General Course Introduction
- Reasons Why Metering is Required
- Overview of measurement Traceability
- Overview of Allocation of Commingled Hydrocarbons
- Overview of Principles of Measurement

Day 2: Hydrocarbon Flow Calculations and Flow Computers

- Overview of Flow Computers
- Liquid Flow Computer Function and Calculations
- Verifying a Liquid Flow Computer
- Meter Proving Flow Computer Function and Calculations

Day 3: Liquid Hydrocarbon Flow Measurement Techniques

- Principles of Liquid Turbine Flow Meters
- Principles of Positive Displacement Flow Meters (Optional)
- Principles of Coriolis Mass Meters
- Liquid Metering Instruments (Density, Sampling, BS&W) (Pressure & Temperature see Gas)

Courses validity : 3 years

Advanced ESP Operation and Troubleshooting

Courses Duration : 5 days.

Scope: Over the span of 5 days, participants will delve into the fundamentals, components, operational features, and design aspects of ESP installations.

Course is designed for: Any

Topics covered under the course:

Day 1: Review of Fundamentals

- Artificial Lifting
- Short History of ESP Applications
- Basic Features of ESP Installations
- Well Inflow Performance
- Hydraulic Fundamentals
- Electrical Fundamentals
- Basics of Systems Analysis

Day 2: ESP Components & Operational Features

- The Submersible Pump
- The ESP Motor
- The Protector or Seal Section
- The Gravitational Gas Separator
- The ESP Cable
- Miscellaneous Downhole Equipment
- Surface Equipment

Day 3: Use of ESP Equipment in Special Conditions

- Pumping Viscous Liquids
- Low or Changing Pumping Rates
- Production of Gassy Wells
- Production of Abrasive Solids
- High Well Temperatures
- Variable-Frequency Operation
- Other Problems

Courses validity : 3 years

Courses Duration : 5 days.

Scope: Through this approach the delegate will progress from learning the fundamentals of PLC application to writing, debugging and finally designing their own programs.

Course is designed for: Any

Topics covered under the course:

Day 1: The Concepts of Hydrocarbon Custody Transfer Measurement

- Introduction to Control Strategies(Continuous Control systems, Sequential Control systems, Relay based systems)
- Introduction to PLC Systems(PLC v relay systems, Programming formats, Logical continuity)

Day 2: PLC Architecture

- System architecture
- Memory and I/O types
- Scanning algorithms
- Program Scan cycle

Day 3: Radio Telemetry Systems

- Introduction
- Elements of a Radio Link
- The radio spectrum
- Frequency ranges
- System design considerations

Courses validity : 3 years

AUTOMATED GAUGING AND METERING
FOR OIL STOCKPILES

Courses Duration : 5 days.

Scope: This training course is designed for a variety of professionals involved in the digitization projects, and it is suitable to a wide range of professionals.

Course is designed for: Any

Topics covered under the course:

Day 1: Oil Stockpiles Measurement

- Introduction, Definitions and Framework
- Importance of stockpiles measurement in oil industry
- Crude stockpiles
- Global crude stockpiles
- Example cases

Day 2: Oil Gauging

- Static measuring- Gauging System
- Tank Gauging systems
- Tank calibration
- Determining the level of product in the tank
- Determining temperature and density of the product in the tank
- Selecting and using the appropriate method

Day 3: ISO 7507 Family of Standards

- ISO 7507-1 Strapping method
- ISO 7507-2 Optical-reference-line method
- ISO 7507-3 Optical-triangulation method
- ISO 7507-4 Internal electro-optical distance-ranging method
- ISO 7507-5 External electro-optical distance-ranging method

Courses validity : 3 years

Courses Duration : 5 days.

Scope: This training will go steps further to highlight current best industry practice with field experience including challenges and how to mitigate identified challenges. This Best Practices course will further show how an integrated production operations approach is applied in addressing these challenges including custody transfer and other terminal nodes.

Course is designed for: Any

Topics covered under the course:

Day 1: Overview of Surface Production Operations

- Introduction to Surface Production Operations
- Tools Supporting Operations Management
- Overview of Well, Reservoir & Facility Management (WRFM) process
- Metering Systems
- Operations Integration

Courses validity : 3 years

Day 2: Production Deferment Administration

- General Principles of Deferment Administration
- Measurements
- Deferment Coding
- Roles & Responsibilities
- HCA Applications

Day 3: Production Allocation & Reconciliation

- Principles of Production Allocation & Reconciliation
- Domain Experts & Required Technology
- Populating and verification/validating process of data
- Allocation & Reconciliation
- Standard HCA Business Workflow

SURFACE EQUIPMENT AND FACILITIES

Courses Duration : 5 days.

Scope: This Surface Equipment Facilities training course will provide a comprehensive overview of all typical oilfield treating and processing equipment. Participants will learn not only the purpose of each piece of equipment but how each works. Emphasis will be on gaining a detailed understanding of the facilities and the working principles of all types of surface facilities equipment.

Course is designed for: Any

Topics covered under the course:

Day 1: Introduction

- Production Fluid Properties and Hydrocarbon Properties
- Qualitative phase behavior and reservoirs
- Typical sales/disposal specifications
- Different Process Facility Configurations
- Flowlines, piping and gathering systems
- Static Equipment

Day 2: Separators

- Principles of Separation
- Separator Application
- Separators Classification
- Stage Separation
- Separators Sizing
- Separators Operation and Troubleshooting

Day 3: Heat Exchangers and Coolers

- Types of heat exchangers
- Basic concepts of heat exchangers construction
- Operation and troubleshooting

Courses validity : 3 years

Courses Duration : 5 days.

Scope: This training course provide an integrated approach to well test design, operation and interpretation. Furthermore, this Advanced Well Test training course provides in-depth expertise on testing methodologies, data acquisition, as well as the pertinent downhole instruments and surface machinery utilised in the well testing process.

Course is designed for: Any

Topics covered under the course:

Day 1: Well Test Fundamentals and Theories

- Background to Transient Pressure Analysis
- Radial Flow Theory
- Diffusivity Equation for Radial Inflow
- Transient, Steady State and Pseudo-Steady State Flow
- Wellbore Storage & Skin Effect
- Radius of Investigation
- Pressure Build-up and Flow Tests
- Interpretation Techniques

Courses validity : 3 years

Day 2: Well Test Interpretation and Analysis

- Basic Well Test Interpretation
- Semi-infinite System Late Transient Analysis
- Well in a Bounded Drainage Area
- Variable Rate Well Test Analysis
- Channel Sands and Parallel Faults
- Constant-pressure Boundaries
- Vertically Fractured Wells

Day 3: Well Test Design & Equipment

- Introduction to Test Design
- Decision to Test or Not
- Objectives of the Test
- Design Criteria
- Role of Simulation in Test Design
- Test String Equipment
- Safety Barriers and Sub-Surface Safety Systems
- Data Acquisition
- Surface Testing Equipment
- Drill Stem Testing - DST

Extended Reach Drilling (ERD)

Courses Duration : 5 days.

Scope: This training course training course will focus to improve the participants' understanding of the design and operational aspects of high angle drilling. The practices for complicated highly deviated wells will be covered and participants will receive instructions on planning and evaluating these wells based on the objectives and how to perform the proper planning for an ERD well.

Course is designed for: Any

Topics covered under the course:

Day 1: Definitions and Introduction

- What is ERD
- Definitions and Achievements
- High Angle Differences
- Simple well Planning

Day 2: Design Factors

- Trajectory Planning
- Torque and Drag basics
- Bulking Basics
- Rig and Equipment for ERD
- Tripping and Backreaming
- Hole Cleaning
- Surge and Swab
- Connection Practices
- Hydraulics and ECD Management
- Hole Condition Monitoring

Day 3: Design Factors (Continued)

- Wellbore Stability Basics
- Differential Sticking
- Tubular Running
- Casing Floatation
- Tubular and Drill Pipe Wear
- Cementing
- Vibration
- Bit and BHA Selection
- Surveying
- Well Design Example

Courses validity : 3 years
